

THE PATENTED SOLUTION  
FOR UNMANNED

## STRETCH WRAPPER SYSTEMS

Finally, an end to knotted film and waiting for wrapping completion.

The FLÖTER Stretch Wrapper is fully automatic. Pallets are placed on a plate, and the wrapping process is started by remote control.

Your distribution employee can pick up the next pallet in the meantime. By the time the employee returns, the pallet will be finished and fully wrapped. Also, the pallet will be ready for pickup positioned exactly at the same angle as when it was placed on the plate.

INTERNATIONAL PATENT – UNIQUE PERFORMANCE

## A NEW GENERATION OF STRETCH WRAPPERS REVOLUTIONIZE SHIPPING.

### Fully automatic LP-SWA

- Fully automatic stretch wrapper with remote control
- Fully configurable control unit (pre-stretch value, number of rotations, upper and lower wrap strength, speed, waiting position for top sheet, slow speed for edge protection angle)
- Integrated film run prevents film from jamming
- Saves up to 80% film through 310% pre-stretching
- Wraps pallets from top to bottom without sticking or knotting
- Applicator that allows rolls to be replaced in a matter of seconds
- Rotary plate in various diameters (up to 2440 mm)
- After the packing process, the rotary plate stops in exactly the same position as it was when the pallet was set down. The pallet can be removed without having to rotate the plate
- Easy installation and operation in the smallest spaces

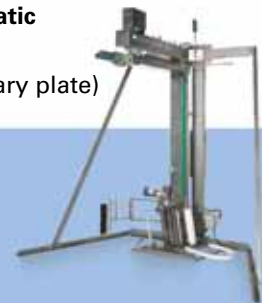

### Semi-automatic models of the rotating tower series for especially large pallets

4100H-FS

### Fully automatic Ultra model (without rotary plate)

4100-35FA-FSU

### Integrated solutions for use in combination with conveyor belt concepts

3300-A

3300-CTA

6100-45 / 6100-65
