

100% HOME COMPOSTABLE
COLORFUL AND SUSTAINABLE AIR CUSHIONS

PlantWave® PRISMA

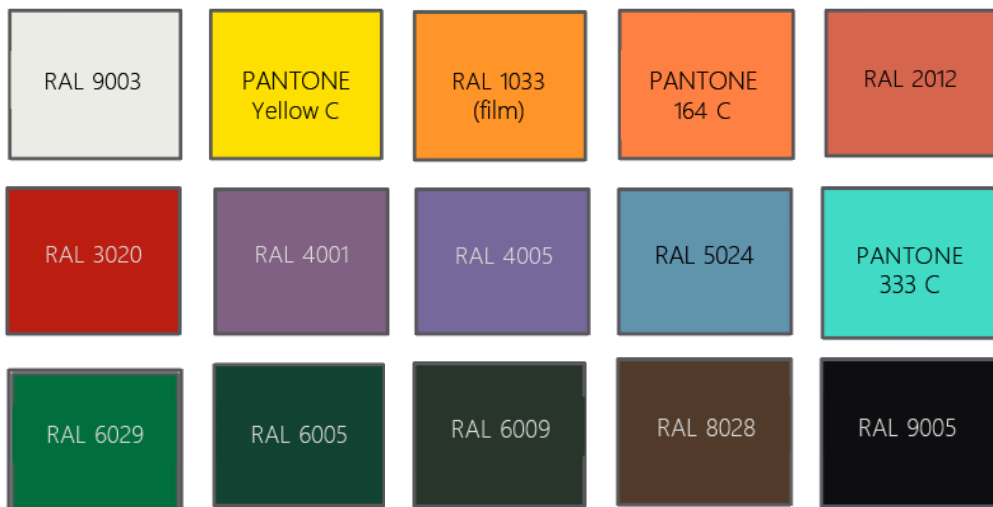

PlantWave® is now available, similar to PaperWave®, as PRISMA - in a wide range of modern colors. It is ideal for high-quality applications, like fashion and cosmetics, where the air cushion should match the identity of the product and other used packaging materials. PRISMA makes your products stand out from competitors: a unique unboxing experience that highlights the value of the product and also sets a clear statement of sustainability.

PlantWave® PRISMA Type 7 for void filling and type 8 for wrapping

PlantWave® PRISMA air cushion films are 100% home-compostable. They are made from regrowing raw materials, including potato starch. The potato starch blend gets completely broken down by bacteria and fungus in the environment and leaves no microplastics behind. It can be disposed of with any organic waste or could be composted in the garden or in the landfill. Easy and environmentally friendly. PlantWave® is suitable for filling small to large cavities or as interlayer and is available as air cushion chains or wrappers.
